Sonus P346

AT THE CENTRE OF SOUND

The P346 represents the Viscount's latest tribute to the Positive organ, a widely used instrument during the baroque period, which had the characteristic to be built in a single "cupboard" cabinet. This construction philosophy had a major impact on the sound as well, giving to the organist and listeners a different tonal perception of the organ stops, starting from the character of the voices, up to their attack transients, presence and diffusion. A revolutionary system called RAR (Real Audio Rendering) is able to recreate with great accuracy the acoustic field produced by a real pipe organ in a large reverberant space. The detailed parameterization given by Physical Modelling, combined with the careful and lengthy work of components integration, has made the sound from the different speakers extremely natural.
